

Department of Master of Computer Application

Session 2025-2026

Progress Report of Mini-Project work – 2

Name of the Projectees	Shiwani Amrute, Prayas Gotefode
Name of the Guide	Prof. Rahul Lilhare
Department	Master of Computer Application
Date of submission	15-10-2025
Title	Online Notes Sharing System
Report for the Period	13-08-2025 to 15-10-2025

Precise Report of the Project work done during the above period (Brief)	
1	Study the various things related to research area • Reviewed platforms like Google Classroom, OneNote, and Ever note for inspiration. • Studied features of open-source note sharing websites. • Understood the need for role-based access control (different access for admin, teachers, and students). • Identified common challenges in note-sharing systems such as file security, duplication, and categorization of notes.
2	Find out the various Techniques / Tools • Selected HTML, CSS, JavaScript, React.js for building responsive and modular frontend components. • Planned integration of Node.js/Express.js for backend and MySQL/MongoDB for database. • Considered JWT (JSON Web Token) for authentication and role management. • Decided on Bootstrap / Tailwind CSS for styling and improved UI/UX.
3	Analysis of existing systems and its weaknesses • Existing systems often require paid subscriptions to access study material. • Some platforms do not support multi-role management effectively (admin/teacher/student separation missing). • Lack of real-time dashboards for tracking notes and user activities. • Inconsistent categorization and search features in many systems. • Some websites lack mobile-friendly UI, reducing accessibility for students.

4	Analysis of existing systems with our system • Our system will allow universal access for viewing notes without login. • Teachers and Admins will have exclusive upload & management rights. • Planned dashboard for monitoring uploads and keeping track of user contributions. • System will be lightweight and mobile-friendly for easy student access. • Use of categorization & search filters to organize notes by subject, semester, or teacher.
5	Publish the Introductory/ Survey paper on research topic: Yes/No No
6	Explore the flow of system <pre>graph TD; Start([Start]) --> Visit[User visits website]; Visit --> View[View Notes Page
(No Login required)]; View --> Admin{is user
Admin/Teacher?}; Admin -- Yes --> Login[Login Page]; Admin -- No --> Browse[Browse & Download notes]; Login --> Verify[Verify Credentials]; Verify --> Dashboard[Access Dashboard]; Dashboard --> Upload[Upload Notes]; Upload --> Analytics[Dashboard Analytics]; Analytics --> Approval[Admin Approval]; Browse --> End([End]); Approval --> End;</pre> The flowchart illustrates the system's process flow. It begins with a 'Start' terminal, leading to 'User visits website', then 'View Notes Page (No Login required)'. A decision diamond asks 'is user Admin/Teacher?'. If 'Yes', the flow proceeds to 'Login Page', followed by 'Verify Credentials', 'Access Dashboard', 'Upload Notes', and 'Dashboard Analytics'. From 'Dashboard Analytics', the flow goes to 'Admin Approval' and then to the 'End' terminal. If the decision is 'No', the flow goes directly to 'Browse & Download notes' and then to the 'End' terminal.

8	Research Papers Published in the refereed/national/international journals in this duration(please attach copy): Yes/No No
9	Research Papers Published in Conference Proceedings/ Seminars in this duration(please attach copy) Yes/No No
10	Conferences/Seminars/workshops attended in this duration: Yes/No Yes
11	Any other achievements No
